☆ ☆ **Q1)** Trace the following assembly code. After we run the code, whether it halts or gives an error (doesn't matter), what will be the <u>hexadecimal</u> values stored in the following addresses, including IR. **[5 points]**

Note: Every hexadecimal value you write must be 2 characters. For example, write 0B for decimal 11.

-			Machine Instruction			
1		LOAD R0, 10	Op-code	Operand	Assembly Instruction	Operation
2		LOAD R1, 0	1	RXY	load R, [XY]	Load R with the content from the
_			1	KXI	load K, [A I]	memory cell at address XY
3		LOAD R2, 2	2	RXY	load R, XY	Load R with the bit pattern XY
4		LOAD R3, LIST	3	RXY	store R, [XY]	Store the content of R into the
		LOND KS, LIST	4	0RS	move S, R	memory cell at address XY Move content of R into S
5			5	RST	addi R, S, T	Add S and T and put the result in R
6	BACK:	LOAD R4, [R3]				(R, S, and T are in two's complement
0	DACK.	LOAD K4, [K3]				integer notation)
7		JMPEQ R4=R0, END	6	RST	addf R, S, T	Add S and T and put the result in R (R, S, and T are in floating-point
0						notation)
8		ADDI R1, R1, R4	7	RST	or R, S, T	OR the bit patterns in S and T and put
9		ADDI R3, R3, R2				the result in R
4.0			8	RST	and R, S, T	AND the bit patterns in S and T and
10		STORE R4, [\$FE]	9	RST	xor R. S. T	put the result in R XOR the bit patterns in S and T and
11		JMP BACK		101	A01 14, 0, 1	put the result in R
		STIL BACK	A	R0X	ror R, X	Circularly rotate the bit pattern in R
12				DAVA	IEO D. DO VV	one bit to the right X times
13	END:	ROR R1, 2	В	RXY	jmpEQ R=R0, XY	Start decoding the instruction located at address XY if the bit pattern in R is
13	LIND.					equal to the bit pattern in register 0
14		STORE R1, [\$FF]	C	000	halt	Halt execution
15		DOD D4 1	D	0RS	load R, [S]	Load R with the content from the
15		ROR R4, 1	Е	0RS	store R, [S]	memory cell whose address is in S Store the content of R into the
16		HALT	Е	UKS	store K, [5]	memory cell whose address is in S
4.7			F	RXY	jmpLE R<=R0, XY	Start decoding the instruction located
17						at address XY if the bit pattern in R is
18	LIST:	DB 2,8,5,10,9,9,10,4,-1				less than or equal to the bit pattern in register 0
10	LIJI.	55 2,0,5,10,5,5,10,4, 1				register 0

Q2) Above assembly code can run without giving and error, or maybe it is wrong and can give an error at some point, you must understand that. Do you think this assembly code will run and <u>halt</u> without an error (write yes or no)? If you said no, why (write just 1 sentence)? **[2 points]**

Q3) Recreate the given webpage visually using HTML. Your code should include a nested list about hamburger ingredients. Ensure your code is correctly structured with proper HTML tags and formatting. **[7 points]**

➤ Page title is "Cool Recipes".

3. General Ingredients

o Lettuce

Tomato

o Cheese

o Ketchup

o Pickles

Mayonnaise

- ➤ Page background is colored with "#FFBBBB" color.
- ➤ Use "h2" for the heading. Also, heading is <u>italic</u>.
- ➤ Image name is "brgB.png", width is "300", height is "367".
- > Outer list items are **bold**.

➤ There is an <u>empty space</u> between each outer list item.
